The clinical examination is a search for clues in an attempt to solve the mystery of a patient's illness. These clues are found usually in the form of "signs" that are demonstrated to the examiner through inspection, palpation, percussion, and auscultation. Signs are the veterinary counterpart to the symptoms possessed by human patients.

The Clinical Examination | Veterian Key

Clinical examination is the "hands-on" process of observing the patient's oral structures and detecting signs and symptoms of abnormal conditions or disease. This information is used to formulate diagnoses, which are a determination or judgment of health versus disease and variations from normal.

3: Patient Assessment, Examination and Diagnosis, and ...

In a physical examination, medical examination, or clinical examination, a medical practitioner examines a patient for any possible medical signs or symptoms of a medical condition. It generally consists of a series of questions about the patient's medical history followed by an examination based on the reported symptoms. Together, the medical history and the physical examination help to determine a diagnosis and devise the treatment plan. This data then becomes part of the medical record.

Physical examination - Wikipedia

It is said that over 80% of diagnoses are made on history alone, a further 5-10% on examination and the remainder on investigation. Whether this adage is true or not may be open to debate but it is clear that history and examination skills remain at the very core of clinical practice.
