RESULTS. More green material was removed by the finches than red, more red than black and more black than orange. The ratio between material of different colors used in nest construction differed significantly from the expected 1:1:1 (X<sup>2</sup> =63.44, df=3, p<.005). When colors were compared in pairs, the difference between values for green and red were not significantly different (X<sup>2</sup> =117, df=1 ...

Taking Varsity Tutors' free High School Biology Practice Tests is a good way to figure out which High School Biology topics you completely understand, and which you still need to work on learning. Each question includes a detailed answer of how to solve it, so if you miss a question, you can figure out where you went wrong.

### High School Biology Practice Tests - Varsity Tutors

The biological fitness of an organism is dependent on its ability to survive and reproduce in a given environment. If different traits or alleles increase the fitness of an organism, those alleles will consequently increase in the gene pool, and that trait will increase in the population. This is how natural selection affects a population.

### Understanding Biological Fitness - High School Biology

Postdoctoral scholar Fatemeh Ganjisaffar of the Frank Zalom lab, UC Davis Department of Entomology and Nematology, will present a virtual seminar on Wednesday, Nov. 10 on "Addressing an Evolving Invasive Species Crisis: Insecticide Resistance Management and Behavioral Control of *Drosophila suzukii*". ### Identity Provider Selection

Friedrich Nietzsche's philosophy addressed the question of artificial selection, yet Nietzsche's principles did not concur with Darwinian theories of natural selection. Nietzsche's point of view on sickness and health, in particular, opposed him to the concept of biological adaptation as forged by Spencer's "fitness".
