For input matrices  $A$  and  $B$ , the result  $X$  is such that  $A * X == B$  when  $A$  is square. The solver that is used depends upon the structure of  $A$ . If  $A$  is upper or lower triangular (or diagonal), no factorization of  $A$  is required and the system is solved with either forward or backward substitution. For non-triangular square matrices, an LU

The shallow-water equations are a set of hyperbolic partial differential equations (or parabolic if viscous shear is considered) that describe the flow below a pressure surface in a fluid (sometimes, but not necessarily, a free surface). The shallow-water equations in unidirectional form are also called Saint-Venant equations, after
