Intermolecular Forces . Intramolecular forces (bonding forces) exist within molecules and influence the chemical properties. Intermolecular forces exist between molecules and influence the physical properties. We can think of H<sub>2</sub>O in its three forms, ice, water and

forces also depend significantly on molecular shape because shape determines how much of one molecule can interact with its neighboring molecules at any given time. For example, part (b) in Figure  $\{\text{PageIndex}\{4\}\}$  shows 2,2-dimethylpropane (neopentane) and n-pentane, both of which have the

Intermolecular forces are also known as intermolecular attractions. I tend to use the two terms interchangeably - they mean the same thing. Inter molecular forces are forces between molecules, in the same way that an intercontinental missile can fly between continents, or an interaction is something happening
