IAPR International Workshop, PSL 2013, held in Nanjing, China, in May 2013. The 10 papers included in this volume were carefully reviewed and selected from 26 submissions. Partially supervised learning is a rapidly evolving area of machine learning.

### **Partially Supervised Learning: Second IAPR International ...**

Partially supervised learning is a rapidly evolving area of machine learning. It generalizes many kinds of learning paradigms including supervised and unsupervised learning, semi-supervised learning for classification and regression, transductive learning, semi-supervised clustering, multi-instance learning, weak label learning, policy learning in partially observable environments, etc.

Alternative classification approaches,  
such as semi-supervised or transductive  
algorithms, are able to utilize this  
partially labeled data. Here, we  
empirically investigate five semi-  
supervised and transductive algorithms  
as "early prediction tools" for  
incompletely labeled datasets of high  
dimensionality and low cardinality.
