A leachate is any liquid that, in the course of passing through matter, extracts soluble or suspended solids, or any other component of the material through which it has passed.. Leachate is a widely used term in the environmental sciences where it has the specific meaning of a liquid that has dissolved or entrained environmentally harmful substances that may then enter the environment.

### Leachate - Wikipedia

So landfill is a bad idea. Besides, dumping them loses the materials and energy they contain. But since they burn, maybe that gives us an obvious solution - incinerate them to generate electricity, or for heat in steelworks or cement kilns. This is known as 'energy recovery', and that is the fate of about half of Europe's tyres.

### What can the world do with 1.5 billion waste tyres? - The ...

What is reprocessing? Stryker's Sustainability Solutions (SSS) is the leading provider of reprocessing and remanufacturing services for single-use medical devices. Reprocessing of single-use medical devices (SUDs) is the practice of inspecting, cleaning, function testing, sterilizing and packaging so that they can be clinically and safely used again.
